

VECTA wist

A new *SPIN* on
**REVERSE
OSMOSIS**

The Purifiner VectaTwist™ Reverse Osmosis system helps provide cleaner, fresher tasting water through reverse osmosis filtration. VectaTwist™ offers multi-stage filtration, incorporating separate sediment and chlorine taste & odor filters for excellent membrane module protection, a sanitary, encapsulated reverse osmosis membrane, and carbon block post-filter with superior flow from a dedicated faucet.

The system is powered by residential line pressure — no electricity required.

VectaTwist™ helps conserve water, shutting down when the storage tank is full and turning back on to refill the tank.

Replacement filters are easy to change:
twist on - twist off.

Up to 400 gallons of water per day.
Easy to install, comes with all the
necessary hardware.
